

Abstract

There are provided a printed circuit board design instruction support method between a circuit design and a printed circuit board design, a printed circuit board design instruction support device between a circuit design and a printed circuit board design, a Web system, a program, an a computer-readable recording medium which improve the work efficiency of the printed circuit board designing and the quality of the printed circuit board design. By selecting a circuit part to which the design rule is applied, a circuit program and a portion-to-be-checked on the printed circuit board are simultaneously displayed by cooperation between the circuit design system and the printed circuit board design system, thereby reducing the time and labor required for check.
